

To Whom This May Concern:

I write my great interest in software development and business management. I am very active as a student and a community leader; serving as an ambassador for my college campus multicultural center and active in organizational clubs. As a junior computer science student at NC A&T State University, my career goal is to develop and ensure quality technology through innovative studies and practices in the healthcare, media, and business arena.

My experiences as a IT intern at Durham County Government has honed my technical skills in front-end development, enhancing my teamwork and collaboration in identifying and addressing problems, and my theoretical and project management skills needed to be fit in the Health Care profession. I offer quick learning and adaptability. As a AT&T intern, I am confident I would serve the needs of the department by assisting in teamwork and collaboration, project management, and creating creative activities for lesson plans. Some of the key strengths I can offer include teamwork, analytical and logical reasoning skills, presentation and speaking skills, in addition in identifying problems of mental illness, any health issues or psychiatric health that world face today and foster mental health through development and innovation of technology in creating service-learning and assistant technology.

Throughout my life, I have been dedicated to lead and serve in my community. I spend my time pursuing technological and innovative business interest's activities, including serving as a multicultural ambassador of the University multicultural center which work with multiple organizations in running events that promotes diversity and bringing awareness of race, ethnicity, country of origin, sexual orientation, gender, physical ability and religion; in addition, my involve with business programs strategically planning marketing strategies for a product for a business (cold coffee product for StarBucks – students as our target market), and lastly, my involvement with Durham County Government with creating mobile technology innovation for Durham EMS department. This mobile application improved delivery of emergency medical Services through the innovative use of mobile technology, providing quick search access to protocols and procedures saving critical time and lives.

I believe that my dedication, willingness to learn, and young minded creativity would allow me to substantially contribute to any organization, company, and the community as a whole. I would greatly appreciate the opportunity to discuss the internship position and how I might be of assistance this summer. I can be reached at (919) 381-7963 or sterilinghb@gmail.com. Thank you for your time—I look forward to hearing back from you!

Sincerest Regards,

Steriling A. Mason
North Carolina A&T State University, School of Engineering
